SUMMARY

Product manager who builds. Own three B2B SaaS platforms end to end and personally build the AI systems behind them, including a Generative AI workflow that took a surveillance product from 1 to 20+ clients in two months.

EXPERIENCE

ZIGRAM | B2B RegTech & AI SaaS **Jan 2025 – Present**
Senior Analyst, Product Management *India*

Own strategy, requirements and delivery across three platforms with a cross functional team.

Transact Comply, AI Transaction Monitoring & Surveillance Platform

- Grew the platform from **1 to 20+ clients in two months** across banking, NBFC, insurance, housing finance, crypto and payments in India, UK and Nepal.
- Designed and built a **Generative AI** workflow (Claude Code) converting regulatory scenarios into production rules, edge case test data and deployment, cutting client configuration from 1 month to **under 48 hours**.
- Authored **PRDs, FRDs and user stories** for the rules engine, ingestion and testing workflows, and drove **stakeholder management** across compliance teams, sales, engineering and QA to align regulatory requirements with delivery priorities.
- Created **500+ production rules** across cross border, crypto, capital markets and NBFC segments using the AI rule creator workflow, removing the delivery ceiling on pre sales and onboarding.
- Built a Source of Truth layer with **AI similarity search** detecting existing or duplicate rules from a scenario description, now used by sales, implementation and product to scope deals and prove coverage in live demos.
- Engineered **guardrails** covering schema validation, a golden rule regression suite and auto generated positive, negative and edge test cases, so no model output reached a regulated production system unvalidated.
- Cut AI inference cost **50%** and raised detection coverage **10%** through cross account identity resolution, and eliminated manual onboarding via automated SFTP ingestion across 40+ file formats.

Profile Builder, Risk Intelligence Platform (35M+ entities)

- Led end to end **Agile delivery** of a full tech stack revamp across multiple sprints, owning backlog grooming, sprint planning, story writing and release management.
- Built the listing module for **entity resolution and classification** plus advanced data table functionality across a 35M+ entity database.
- Shipped Advanced Global Search with filtered queries across 35M+ entities.
- Defined requirements for an **AI extraction pipeline** with source attribution and confidence thresholds routing low certainty outputs to human review.
- Ran user interviews and authored **PRDs, FRDs**, design documents, user journeys and wireframes, replacing spreadsheet driven analyst operations with structured, auditable workflows.
- Owned functional and UI testing and drove **UAT** sign off through to production release.

Privacy Panda, DPDP Act 2023 Compliance SaaS (0 to 1) (Link)

- Framed DPDP compliance as two opposing workflows, where Data Principals need frictionless consent control and Data Fiduciaries need auditable evidence, and designed a dual portal product on a shared backbone.
- Built the working prototype **independently** using Claude Code, GPT and Antigravity with no dedicated engineering capacity; approved by the executive team as the build baseline.
- Authored product vision, personas, **user stories**, user flows, compliance architecture and a **58 endpoint multi tenant API** specification, mapping each statutory obligation to a product capability.
- Instrumented **PostHog** analytics, defining the event taxonomy across consent funnel completion, data rights drop off and task success to set activation baselines before build.

SKILLS

Product: Product Strategy, Discovery, User Research, Requirement Gathering, PRD, BRD, FRD, User Stories, Wireframing, User Journeys, Roadmapping, Prioritisation, 0 to 1 Product Development, GTM, KPIs

Delivery: Agile, Scrum, Sprint Planning, Backlog Grooming, Release Management, JIRA, SDLC, UAT, Functional & UI Testing, Cross functional Leadership, Stakeholder Management

AI & Technical: Generative AI, LLM Applications, Prompt & Context Engineering, RAG, Agentic Workflows, AI Evaluation & Guardrails, Claude Code, GPT, MCP, SQL, Python, REST APIs, Postman, PostHog, YAML DSL, Git, CI/CD

Domain: RegTech, FinTech, Transaction Monitoring, AML/CFT, KYC, Fraud Detection, Capital Markets Surveillance, Sanctions & PEP Screening, Entity Resolution, DPDP Act 2023

EDUCATION

Guru Gobind Singh Indraprastha University, New Delhi **2021 – 2025**
B.Tech, Information Technology | CGPA: 9.08/10
